Overview:

Building on the principles and techniques covered in Intro to Web Design (MART 341), this project-based class focuses on media integration, interactivity, client-side development, and server-side development for the presentation and development of artistic websites.

This online advanced web technologies course will explore the latest in web technologies. This will begin with a refresher of HTML5 and CSS3. Next will be a thorough exploration of JavaScript (JS) for client-side site development and interaction. The final topic will touch on the power of JS and node.js for server-side development. A number of JavaScript libraries will be explored for how they can speed up the artistic process.

Objectives:

At the conclusion of this semester, students should;

- Feel comfortable creating static sites with advanced HTML5 & CSS3 techniques.
- Be capable of using JavaScript (JS) and jQuery to create "interactive elements" and manipulate the DOM.
- Be capable of incorporating external JS libraries, such as 3js, d3 or tone.js to create engaging sites.
- Have a basic understanding of the role node.js plays in web development.
